

## **DocuSnap - Price list 2012**

*English Version*

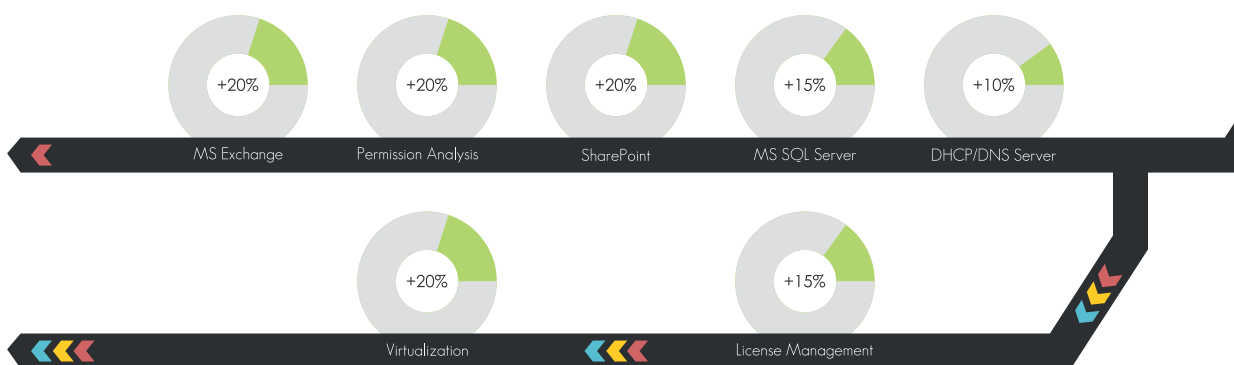

# Basic Price

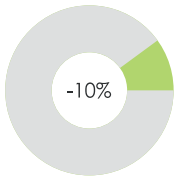

The basic license price is calculated according to the number of Windows computer accounts in the Active Directory and the number of Linux and Mac systems.

# Modules

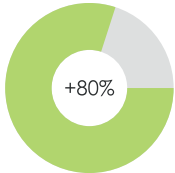

Pricing of the optional modules is calculated as a percent surcharge, based on the basic price for the Windows systems. The only exception to this are the Virtualization and License Management modules. The surcharge for these modules is based on the total price of all Windows, Linux and Mac systems.

## Bundle discount

If you buy all seven modules, you will benefit from a bundle discount of 10% on the total basic price.

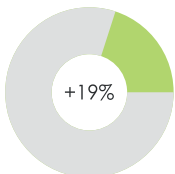

## Multi-license

The multi-license extends the Docusnap features to include multi-tenant capability and enables the software for use in subsidiaries. IT service providers with a multi-license may employ Docusnap for the documentation of their customers' networks.

## Customizing

With the Customizing module, you can edit existing data structures, objects and data entry screens or create new ones.

## Annual maintenance agreement

The optional maintenance agreement, at a great value price, helps you ensure the sustainability of your entire investment and guarantees that you will always benefit from the most current version.

## Pricing example:

	No. of Windows systems used	50	400.00 €
